Sequence 3, Application US/09930181
Patent No. 6455292
GENERAL INFORMATION:
APPLICANT: Origene Technologies
TITLE OF INVENTION: Full-Length Serine Protein Kinase in Brain and Pancreas
FILE REPERENCE: 160 101 V1
CURRENT APPLICATION NUMBER: US/09/930,181
CURRENT FILING DATE: 2001-08-16
NUMBER OF SEQ ID NOS: 18
SOFTWARE: Patentin version 3.0

Sequence 3, Application US/10003690

Patent No. 6787345

GENERAL INFORMATION:

APPLICANT: ROTY A.J. Curtis

TITLE OF INVENTION: 55053, A No. 6787345el Human Eukaryotic Kinase

TITLE OF INVENTION: and Uses Therefor

FILE REFERENCE: MNI-206

CURRENT APPLICATION NUMBER: US/10/003,690

CURRENT FILING DATE: 2001-11-15

PRIOR APPLICATION NUMBER: 60/248,893

FRIOR FILING DATE: 2000-11-15

NUMBER OF SEQ ID NOS: 8

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NOS: 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

Novel murine and human kinase nucleic acids useful for treating inflammations, infections, tumors, allergies, autoimmune diseases, and for stimulating or suppressing immune responses.

WPI; 2001-061546/07. P-PSDB; AAB50056.

Claim 1; Page 86-87; 106pp; English.

The present sequence is the coding sequence for Murine Lymph node Stromal cell kinase 1 (MLSK-1). The protein encoded by the present sequence is useful for treating a variety of disorders listed in the disclosure of the specification, including autoimmune disorders, allergic reactions, mayeloid or lymphoid cell deficiencies, wound healing and tissue repair and replacement, burns, incisions and ulcers, periodontal disease, inflammatory diseases, tumours and bacterial, viral or fungal infection

The invention relates to an AMPK (AMP-activated protein kinase)-related kinase, designated SNARK polypeptides and polymucleotides. SNARK contracted protein kinase) is involved in stress response to glucose deprivation. The polymucleotides are useful for expressing SNARK protein in isolated form or as a protein conjugate. Activation of SNARK protein in isolated form or as a protein conjugate. Activation of SNARK in catal and in the catal and selects and selects and selects and selects that would enhance the disposal of glucose to have insulin-like effects that would enhance the disposal of glucose into muscle and reduce plasma glucose for the treatment of diabetes and some type of disorders of lipopycerides. SNARK or its variants may be administered to a subject to treat or prevent a disease associated with decreased expression of SNARK, such as diabetes. SNARK antibodies are used to modulate SNARK activity either in vivo for therapeutic purposes. SNARK antagonists may be administered to increase the surface of in vitro, for drug screening and related investigational purposes. SNARK antagonists may be administered to increase full propose in a partiant decrease divides intake and increase levels of blood of linose in a partiant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         glucose uptake and increase levels of blood glucose in a patient g from hypoglycaemia. The present sequence is rat SNARK CDNA

The present invention relates to the isolation of a novel human protein kinase designated 3700, and the polymucleotide sequence encoding it. The invention also describes the use of a modulator of the activity of protein kinase (PK) 3700 for making a medicament or pharmaceutical composition for modulating the ability of a cell to phosphorylate an amino acid residue of a subservate protein. Modulators of protein kinase 3700 activity are useful for modulating protein phosphorylation, cell signalling, tumourigenesis, mitogenesis, transcription of a gene, and progression of atherosclerosis, and signalling across the blood-brain barrier. The polymucleotide and signalling across the blood-brain barrier. The polymucleotide and solypeptide molecules for protein kinase 3700 may be used as diagnostic targets and therapeutic agents for prognosticating, diagnosing, preventing, inhibiting, alleviating, or curing PK-related disorders and callular proliferative and/or differentiative disorders and callular proliferative and/or differentiative disorders and callular proliferative and/or carcinoma, metastatic disorders or leukaemia). The 3700, to carcinoma, sarcoma, metastatic disorders or leukaemia). The 3700, to detect a genetic alteration in a 3700 gene, in chromosome mapping, for
